

POWERFOG P60

THE NEW FOGGERS FOR THE POTATO INDUSTRY

The tried and true Powerfog technology in a new sector

The Powerfog P60 is the latest development in the field of sprout inhibitions. **The fogger uses a well-known cold fog technique to distribute the agents in the storage building.**

No heat is involved, so flammable inhibitors can be fogged safely. The air pump ensures a uniform mist in the storage warehouse, where the internal ventilation ensures further distribution through the potato stack.

Depending on the options on your fogger, your product may look different from the image

FOGGING & HYGIENE

POWERFOG P60

THE NEW FOGGERS FOR THE POTATO INDUSTRY

Specifications

- **Completely automated fogging program**
- Robust system
- Tested with the sprout inhibitor Argos
- 4,1 kW vacuum pump
- The fogger must be placed outside
- No compressor needed
- The nozzle head is adjustable in size

Capacity

20 litres per hour. *

Tank size

60 litres.

Air throw

20 meters.

Power

400 V / 16 A.

Droplet size

19 µm.

Mobility

Mobile
But not during fogging.

* Capacity is always dependent on agent and other external factors

Option detachable nozzle
